PSICAMB. Asociación de Psicología Ambiental

Mensaje del Presidente de PSICAMB

José Antonio Corraliza

Estimadas y estimados colegas de PSICAMB,

Os llega la primera Newsletter de PSICAMB después del XVII Congreso de Psicología Ambiental de Málaga, que supuso un hito en la comunicación científica y en el que se renovó la Junta Directiva de la Asociación. Aún se mantienen vivos algunos recuerdos de los momentos de encuentros personales y de intercambio científico que supuso este Congreso gracias al estupendo equipo de trabajo presidido por la profesora Mari Carmen Hidalgo. Los congresos son el mayor recurso para hacer visible el trabajo de todas las personas vinculadas a PSICAMB. Este y otros logros de la Asociación son fruto del dedicado trabajo de las juntas directivas anteriores, cuyo esfuerzo merece un agradecimiento especial por parte de todas y todos los miembros de PSICAMB que, en nuestro caso, queremos personalizar en la profesora M^a Carmen Aguilar y la Junta directiva que trabajó con ella. Los congresos y las publicaciones de los trabajos que en su seno se presentan y discuten constituyen el armazón estructural básico de la memoria de PSICAMB. El próximo congreso se celebrará en Bilbao en el primer trimestre del año 2027 y en él ya está trabajando especialmente la profesora Laura Vozmediano, nuestra vicepresidenta.

Vivimos unos tiempos en los que las cuestiones ambientales reflejan aspectos claves que inciden en la vida de las personas y afectan a la organización social y no son sólo fruto de ejercicios académicos al margen de la vida cotidiana. Un rápido repaso de los temas de los trabajos del último congreso muestra que nuestras líneas de trabajo académico y profesional están estrechamente relacionadas con cuestiones que afectan a la organización social y a la vida cotidiana de las personas. Algunos de estos problemas son, entre otros, los desafíos derivados de la emergencia climática, la necesidad de la reconexión con la naturaleza y la importancia estratégica de la evaluación de los entornos cotidianos que inciden poderosamente en el bienestar de las personas. Estos problemas, tal como se decía en los inicios de la Psicología Ambiental, surgen como consecuencia de procesos de mala adaptación en la relación entre las personas y los entornos en los que viven.

Un ejemplo es el caso de los recientes incendios que han calcinado más del 1% del territorio de la Península Ibérica que ilustran como poco que tenemos que repensar la relación entre las personas y los grupos con los territorios. En la explicación de las causas y las secuelas de estos desafíos tiene una importancia estratégica la investigación y la actividad profesional de la Psicología Ambiental. Uno de los mayores retos de PSICAMB, como hablamos en la Asamblea que tuvo lugar en Málaga, es precisamente hacer más visible y socialmente relevantes los trabajos, académicos y profesionales, que diariamente llevan a cabo las personas vinculadas a PSICAMB. Estos trabajos son una fuente imprescindible para mejor conocer la relación entre las personas y sus ambientes. Necesitamos que estos trabajos sean más conocidos tanto en el mundo académico como en el de la gestión ambiental y más accesibles a nuestros propios colegas. En este sentido, la nueva Junta está trabajando en el rediseño de nuestra web que esperamos que pueda estar accesible en los próximos meses y que esperamos que pueda contar también con un buzón específico para la Newsletter.

La Newsletter en nuestra Asociación es uno de los principales recursos para hacer visible las actividades de PSICAMB. Os invitamos a alimentar con información y reflexiones a partir de vuestra actividad académica y/o profesional. Noticias referidas a publicaciones, actividades profesionales y encuentros son bienvenidas. Esperamos poder contar con vuestras colaboraciones y seguir construyendo la memoria fluida de la Psicología Ambiental que refleje la actividad de los y las miembros de la asociación en nuestros contextos.

Os anticipamos que ya estamos trabajando en la próxima Escuela de Verano que tendrá lugar en Canarias a mediados del próximo año. Será un recurso de formación e intercambio más que PSICAMB ofrece especialmente dirigido a personas que se incorporan al apasionante campo de la Psicología Ambiental.

Empezamos un curso nuevo con problemas que abrasan nuestra conciencia personal y colectiva, como las guerras y el exterminio que afecta a la población de Gaza. A pesar de estos horizontes sombríos, en nombre de la Junta Directiva, os deseamos un provechoso curso, lleno de éxitos personales y profesionales. Y os invitamos a compartirlos con el resto de los miembros de PSICAMB.

Un cordial saludo,

José Antonio Corraliza

PSICAMB. Asociación de Psicología Ambiental

Mensagem do Presidente da PSICAMB

José Antonio Corraliza

Caras e caros colegas da PSICAMB, Apresentamos a primeira Newsletter da PSICAMB após o XVII Congresso de Psicologia Ambiental, realizado em Málaga, que foi um marco na comunicação científica e onde se renovou a Direção da Associação. As memórias dos encontros pessoais e do intercâmbio científico que este Congresso representou permanecem vivas graças à excelente equipa presidida pela Professora Mari Carmen Hidalgo. Os congressos são o maior recurso para dar destaque ao trabalho de todos os associados da PSICAMB. Esta e outras conquistas da Associação são fruto do trabalho dedicado das direções anteriores, cujos esforços merecem um agradecimento especial de todos os membros da PSICAMB. No nosso caso, gostaríamos de expressar nossa gratidão à Professora M^a Carmen Aguilar e à Direção que com ela trabalhou. Os congressos e as publicações dos trabalhos neles apresentados e discutidos constituem a estrutura básica da história da PSICAMB. O próximo congresso será realizado em Bilbao, no primeiro trimestre de 2027, e a Professora Laura Vozmediano, nossa vice-presidente, já está trabalhando para a sua concretização.

Vivemos em tempos em que as questões ambientais refletem aspetos-chave que impactam a vida das pessoas e afetam a organização social, e não são meramente o produto de exercícios académicos fora da vida quotidiana. Uma rápida revisão dos temas discutidos no último congresso mostra que as nossas linhas de trabalho académico e profissional estão intimamente relacionadas com questões que afetam a organização social e a vida quotidiana das pessoas. Alguns desses problemas incluem, entre outros, os desafios decorrentes da emergência climática, a necessidade de reconexão com a natureza e a importância estratégica da avaliação dos ambientes quotidianos, que têm um impacto poderoso no bem-estar das pessoas. Estes problemas, como foi dito nos primórdios da Psicologia Ambiental, surgem como consequência de processos mal adaptativos na relação entre as pessoas e os ambientes em que vivem.

Um exemplo são os recentes incêndios que queimaram mais de 1% da Península Ibérica, que ilustram, no mínimo, que precisamos de repensar a relação entre indivíduos e grupos e os seus territórios.

Na explicação das causas e consequências destes desafios, a investigação e a atividade profissional em Psicologia Ambiental são de importância estratégica.

Um dos maiores desafios da PSICAMB, como discutimos na Assembleia realizada em Málaga, é justamente tornar o trabalho académico e profissional realizado diariamente pelos associados da PSICAMB mais visível e socialmente relevante. Este trabalho é uma fonte essencial para uma melhor compreensão da relação entre as pessoas e seus contextos. Precisamos de tornar este trabalho mais conhecido tanto no mundo académico como no mundo da gestão ambiental, e mais acessível aos nossos próprios colegas. Nesse sentido, a nova Direção está trabalhando na reformulação do nosso site, que esperamos que esteja acessível nos próximos meses e também inclua uma área dedicada às newsletters.

A newsletter da nossa Associação é um dos principais recursos para divulgar as atividades da PSICAMB. Convidamos todos vós a contribuir com informações e reflexões baseadas no vosso trabalho académico e/ou profissional. Notícias sobre publicações, atividades profissionais e encontros são bem-vindas. Aguardamos as vossas contribuições e a oportunidade de continuar a construir uma memória fluida da Psicologia Ambiental que reflita o trabalho dos membros da associação nos nossos contextos.

Gostaríamos de informar que já estamos a trabalhar na próxima Escola de Verão, que acontecerá nas Ilhas Canárias em meados do próximo ano. Será mais um recurso de formação e intercâmbio que a PSICAMB oferece, especialmente para aqueles que ingressam na apaixonante área da Psicologia Ambiental.

Iniciamos um novo ano letivo com problemas que afetam a nossa consciência pessoal e coletiva, como as guerras e o extermínio que afeta a população de Gaza. Apesar dessas perspectivas sombrias, em nome da Direção, desejamos a todos um ano letivo frutífero, repleto de sucessos pessoais e profissionais. E convidamos todos a compartilhá-los com os demais membros da PSICAMB.

Saudações cordiais,

José Antonio Corraliza

PSICAMB. Asociación de Psicología Ambiental

Message from PSICAMB President

José Antonio Corraliza

Dear PSICAMB colleagues,

You are receiving the first PSICAMB Newsletter after the XVII Environmental Psychology Conference held in Málaga, a milestone in scientific communication and meetings and an event in which the IAPS Board was renewed. The memories of personal encounters and scientific exchanges from this Congress are still vivid, thanks to the excellent team led by Prof. M^a Carmen Hidalgo. These conferences remain the most important platform for making visible the work of all those connected to PSICAMB. This and other achievements of the Association are the result of the dedicated efforts of previous boards, whose commitment deserves our deepest gratitude. In our case, we would like to express it personally to Professor M^a Carmen Aguilar and the board that worked with her. Conferences, along with the publications of the research presented and discussed in these forum, form the essential backbone of PSICAMB's collective memory. The next Conference will be held in Bilbao in the first quarter of 2027, and Prof. Laura Vozmediano, our vice president, is already working on it.

We live in times when environmental issues highlight key aspects that affect people's lives and social organization. They are not merely the outcome of academic exercises disconnected from daily life. A quick overview of the research topics at the last conference reveals that our academic and professional work is closely linked to matters that shape both social organization and everyday experiences. Among these challenges are the consequences of the climate emergency, the need to reconnect with nature, and the strategic importance of evaluating everyday environments that strongly influence people's well-being. As highlighted in the early stages of Environmental Psychology, these problems arise from processes of maladaptation in the relationship between people and the environments in which they live. A striking example is the recent wildfires that burned more than 1% of the Iberian Peninsula, showing the urgent need to rethink the relationship between individuals, communities, and their territories.

Environmental Psychology research and practice play a strategic role in understanding both the causes and the consequences of these challenges.

One of the greatest challenges for PSICAMB, as discussed at the Málaga Assembly, is to make the academic and professional work of our members more visible and socially relevant. These contributions are essential for better understanding the interaction between people and their environments. We need them to be more widely known, both in academic circles and in the field of environmental management, and more accessible to our colleagues. In this direction, the new Board is working on a redesign of our website, which we hope will be available in the coming months and will include a dedicated space for the Newsletter.

Within our Association, the Newsletter is one of the main tools to showcase PSICAMB's activities. We invite you to contribute with information and reflections based on your academic and/or professional work. News about publications, professional activities, and events are always welcome. We hope to count on your contributions to continue building the living memory of Environmental Psychology that reflects the work of our members in their respective contexts.

We are also pleased to share that preparations are already underway for the next Summer School, which will take place in the Canary Islands in the middle of next year. This will be another valuable opportunity for training and exchange, especially aimed at those entering the fascinating field of Environmental Psychology.

We begin this new academic year facing issues that weigh heavily on our personal and collective conscience, such as the wars and extermination affecting the population of Gaza. Despite these somber horizons, on behalf of the Board, we wish you a fruitful year, full of personal and professional success, and we warmly encourage you to share these achievements with the rest of the PSICAMB community.

*With kind regards,
José Antonio Corraliza*

Dime qué es la naturaleza y te diré quién eres: Representaciones de la naturaleza y su relación con variables psicoambientales

Resumen: El término "naturaleza" puede tener diferentes significados para las personas, lo que dificulta entender cómo la perciben. En esta investigación se analiza cómo las personas organizan la naturaleza según la representan sus elementos, y cómo esta taxonomía se asocia con características sociodemográficas, así como con la conectividad con la naturaleza, la preocupación ambiental y la percepción del ser humano como parte de la naturaleza. Participaron 422 personas de la población general ($M = 31,3$ años, 64,5 % mujeres), quienes evaluaron si el ser humano y 15 elementos eran representativos de la naturaleza. Los elementos se clasificaron en cinco categorías: animales salvajes y domésticos, vegetales silvestres y domésticos y elementos geográficos. Además, proporcionaron información sociodemográfica su nivel de conectividad con la naturaleza y de preocupación ambiental. Un análisis de clúster de clases latentes identificó siete formas de percibir la naturaleza, que van desde aquellos que consideran que todos los elementos son representativos de la naturaleza, hasta aquellos que solo perciben como naturales a las plantas o a los elementos no domesticados. Otros grupos perciben a todos los elementos como representativos de la naturaleza, pero en menor medida que los anteriores. Posteriormente, se observó que en los grupos que consideran más elementos como naturaleza es más probable que haya mujeres y personas de mayor edad, sin diferencias notables en ideología política. En cambio, en los grupos con representaciones más restringidas es más probable que haya personas jóvenes. Por último, las personas con una visión más holística de la naturaleza mostraron una mayor conectividad con ella, mayor preocupación ambiental y una creencia más fuerte de que el ser humano también es representativo de la naturaleza. En conclusión, las personas tienen diferentes percepciones sobre qué es naturaleza. Algunas consideran que todos los elementos son naturales en mayor o menor medida mientras que otras atienden a particularidades, como considerar que solo las plantas o la ausencia de intervención humana son naturales. Además, las mujeres y las personas de mayor edad incluyen una mayor diversidad de elementos como representativos de la naturaleza, en comparación con los hombres y las personas más jóvenes. Es importante destacar que estas diferentes representaciones tienen repercusiones en variables psicoambientales relevantes, como la conectividad con la naturaleza o la preocupación ambiental. Por lo tanto, es interesante considerar estos perfiles para aquellos que buscan impulsar una mayor conciencia y acción ambiental en distintos grupos de la población.

Mensaje de la Junta Directiva a la comunidad de PSICAMB en España:

En enero pasado se constituyó, de manera oficial, la Mesa de Trabajo en Psicología Ambiental del Consejo General de la Psicología en España. Este espacio reúne a profesionales colegiados con el propósito de evaluar el estado de la Psicología Ambiental aplicada, responder a las peticiones de los medios de comunicación derivadas desde el Consejo, y promover iniciativas que aumenten su visibilidad en todo el territorio a través de los colegios oficiales.

Actualmente, nuestra presencia como asociación en dicha Mesa resulta escasa. Asimismo, solo la mitad de los colegios provinciales cuenta con un representante, y la mayoría de ellos proceden de ámbitos diferentes a nuestro campo — clínico, comunitario o de intervención social—. Con el fin de asegurar que la voz de las y los especialistas en Psicología Ambiental esté debidamente representada, PSICAMB invita a sus personas socias colegiadas a interesarse por la Mesa en su respectivo colegio profesional y a presentar su candidatura como representantes provinciales.

La implicación de profesionales con experiencia en este ámbito es esencial para asesorar sobre su aplicabilidad, impulsar proyectos, eventos, y reflejar con fidelidad las necesidades y aportaciones de nuestra disciplina. Formar parte de este órgano estratégico a nivel nacional no solo fortalece nuestra asociación, sino que enriquece el conjunto del colectivo de la Psicología.

Para más información o asesoramiento, pueden ponerse en contacto con PSICAMB.

Agradecemos de antemano su compromiso y su valiosa participación.

SRA-E Iberian

UNIVERSIDADE
DE ÉVORA

The 6th Iberian Chapter Conference of the Society for Risk Analysis - Europe (SRA-E Iberian) was held on 18 and 19 September 2025 at the University of Évora, Portugal. Organised by the University of Évora Department of Psychology, the event brought together academics, professionals, and members of the civil society to exchange knowledge and perspectives on risk assessment, management, and prevention. This year's theme, *'Systemic risks in a changing world: Bridging Science and Society for Evidence-Based Practice'*, guided discussions throughout the conference.

Over the two-day conference, which also included a field trip to the Alqueva Dam and the beautiful fortified medieval village of Monsaraz, we welcomed a total of 46 participants. The scientific program featured 43 posters, including 8 presented in the Best Student Poster Award category and 35 presented in the Non-Student Poster Award category. The program also featured engaging talks by three distinguished keynote speakers:

- Rui Leite from the University of Évora (Portugal) on *'New Risks, Old Problems: Economic Uncertainty in a Changing World'*
- Antonio Aledo from the University of Alicante (Spain) on *'Deliberate Ignorance and the Failure of Disaster Governance: The Valencia Floods of October 2024'*
- Barbara Tiozzo from the Istituto Zooprofilattico Sperimentale delle Venezie (Italy) on *'Food Risk Communication Essentials: Bridging Theory and Practice'*

On behalf of the organizing committee we thank everyone that participated in this year's edition of the SRA-E Iberian Chapter Conference, and we look forward to seeing you next year in Alicante, Spain!

Description

Originally published in 1993, as part of the *Ethnoscapes: Current Challenges in the Environmental Social Sciences* series, reissued now with a new series introduction and new preface, *Environmental Psychology in Europe*.

Table of Contents

New Series Introduction to the Reissue *David Canter and David Stea*. New Preface. Figures and Tables. Once Upon a Time... Preface of the English Edition. Preface of the Spanish Edition. **Part 1: General Approaches** 1. The Science as a Social Organisation: Objectives and Processes 2. The Definition of a Space for Environmental Psychology **Part 2: The Origin and Development of Environmental Psychology in the Principal European Cultural Areas** 3. Environmental Psychology in Great Britain 4. Environmental Psychology in Sweden and the Scandinavian Countries 5. Environmental Psychology in France and the Francophone Area 6. Environmental Psychology in the Germanic Area 7. Environmental Psychology in the ex-USSR 8. Environmental Psychology in Italy 9. Environmental Psychology in Spain. Epilogue to Part Two: The Netherlands, Portugal, Greece and Turkey **Part 3: Europe as a Whole** 10. Environmental Psychology: Pluridisciplinary Science versus Applied Psychology 11. Who is Who: The Most Notable Authors and Nuclei 12. The Invisible Colleges 13. Prospective and General Conclusion **Postscript: 1984-1992** 14. From Architectural Psychology to Green Environmental Psychology. Epilogue. Appendix. Statistical Appendix. Bibliographical Appendix: Historical and Functional Classics. Bibliographical References.

Thirty-one Years Later...

Preface of the Reissue

Thirty-one years later... it's really an honor and a pleasure to have received the invitation to reprint my book on the history of Environmental Psychology. An honor, accompanied by a touch of sadness...

An honor, in terms of the recognition of the work done and the small contribution that all this documentary and personal research meant, during the 80s of the last century... ("last century" sounds very strong... !!!).

But also a sadness since, despite the time that has passed, I have no evidence of significant contributions that allow us to expand the understanding of the origin and evolution of a "disciplinary" area (or "sub-disciplinary", depending on who you listen to). In addition ("apparently", rather than "substantively") main object has been changing the focus, for not to mention the object of study.

Apparently, if we look at the dominant name in Europe during the 70s of the 20th century, that of "Architectural Psychology", it has little to do with the dominant names (or adjectives) in the first quarter of the 21st century, such as those of "Psychology of (or for) Climate Change", "Psychology of Sustainability," among many others. The question then is obvious: are we talking about the same thing? Or do we push ourselves to create our 'own' study spaces, as a defense of particular (and low-level) interests?

Re-reading the 1993 text, I realize that in a very high percentage, it is still in full force. That in fact, in the documentation analyzed to build the history of our discipline (where the texts of Lenelis Kruse and Carl Graumann played - and continue to play - a fundamental role, in addition to those of Gerhard Kaminski and some more recent ones such as those of Hartmut Günther and collaborators), already points to the common ground between what seemed to be the main object of the Architectural Psychology and the object of the Psychology of Climate Change.

The Architectural Psychology wanted to create comfortable spaces to facilitate people's well-being. Psychology oriented to Climate Change - dominant at present -, wants to face/adapt to the climate emergency, changing habits, individual and social behaviors, ways of doing things, ways of consuming, production technologies... etc. In other words, everything that facilitates, harms or simply affects the well-being of people, in their 'behavior setting', that is, their 'ecosystem'.

And here we find one of the several oldest links that, in an apparently paradoxical way, put us in front of the most modern interpretation of the object of study. In the transition from the 19th century to the 20th century, the Jakob von Uexküll's peculiar way of understanding the *Umwelt* laid the foundations of the modern concept of "ecosystem", including the symbolic dimension of the place, which is different for each species. The *Behavior Setting* of Roger Barker (author who calls his research *Ecological Psychology*, but he only works in architectural environments), we can consider it to be a consequence, although possibly without awareness of this relationship.

Here we are faced with the need to look in a different way at the dominant globalization, the overconsumption, the overproduction of emissions that it entails. We have also to question the difficulty (for some uselessness or even inadvisability due to its negative effects) of generating universal laws of environmental behavior in people and social groups, when the characteristics of each ecosystem are different, and require behaviors adjusted to the needs and possibilities of these ecosystems.

In fact, if we dare to look further back, we should see how the cultures, the cultural differentiations of the world and humanity, have to do with the effects of the environmental peculiarities of each place, of each ecosystem. But we forget this too often, and we end up with a simplified, reductionist (but apparently rational) idea of our history, our evolution, and why we are here, with the problems of our present and future.

As the Catalan writer, Josep Maria Espinàs ("only" literate, neither scientific nor pseudoscientific), said coincidentally also in 1993, *The Ecologism is an Egoism*. It is the fear - he said - of losing what has brought us to the ways of life of the present, the ones we are used to and the ones we don't want to give up.

But all this is waiting to finish showing, to finish arguing, and to see if we still have time - altruistically or selfishly - to survive the present threats with some dignity, but always bearing in mind that it is not only an environmental resources problem. It is, inevitably, a problem of the model of society, of economic interests (which dominate and manipulate ideologies and political interests). And we have to be careful: emphasizing only the "scientific" dimension implies - or sometimes hides - strategies of control and power... But this would take us to dimensions that exceed what I wanted - and I still want - to contribute with this text on the history of Environmental Psychology.

Enric Pol
Barcelona, April 2024

Europe: From Architectural Psychology to Green Psychology sets out to explain the nature of environmental psychology, how it was born, how it developed, what were its dominant subjects, its principal actors and its present state in Europe at the time. The volume covers each European country, looking at the origin and development of the subject in the principal European cultural areas.

Enric Pol is Professor of Social and Environmental Psychology at the University of Barcelona. Since 1987, he has directed the Master's in Environmental Intervention and Management: Person and Society. Between 2005 and 2021, he coordinated the Research Group in Social, Environmental and Organizational Psychology (PsicoSAO). He has coordinated the Interdisciplinary Doctorate program in Environmental Sciences and Technologies (2006-2016) at the University of Barcelona. Between 2007 and 2012 he was coordinator of the Erasmus Mundus Inter-University Master's in Work, Organizational and Personal Psychology-WOP-P of the University of Barcelona, with four other European universities. From 2014 to 2021 he was director of the Interuniversity Master's in Psychosocial Intervention. From 2008 to 2012 he was Director of the Department of Social Psychology at the University of Barcelona.

He works, researches and has developed Environmental Management Instruments, such as the DIS/BCN (Social Impact Detection), applied to a multitude of projects, including the Environmental Impact Assessment of part of the Madrid-Barcelona AVE. He has worked on resistance to environmental change and conflicts, with an emphasis on individual and social behavior, social movements and organizations, educational, communicative and socialization aspects. Reviewer of national and international journals and research projects, he has developed numerous research and advisory activities for companies and public administrations in education, communication, management and citizen behavior in relation to environmental issues.

Author of numerous publications, the one reissued here from 1993, *Environmental Psychology in Europe*, stands out. He is co-editor of *100 Key Concepts in Environmental Psychology*, Routledge (2023).
